HAMZA KADER

SOFTWARE ENGINEERING STUDENT | BACKEND & FRONTEND DEVELOPMENT

Benguerir, Morocco | +212 636 029 870 | hamzared2500@gmail.com
github.com/H0mZ0 | linkedin.com/in/hamza-kader
Available immediately | 4-6 month internship | Open to remote work and relocation within Morocco

PROFILE

Software engineering student at 1337 Coding School (42 Network / UM6P), with hands-on experience in web application development, backend and frontend development, and C/C++ systems programming. Built Python/FastAPI services and React interfaces for a five-person web application, with PostgreSQL, authentication and API integration. Advanced Git skills, intermediate Django knowledge, and practical Linux/Docker experience.

TECHNICAL SKILLS

Backend: Python, FastAPI, Django (intermediate), REST APIs, Pydantic, asynchronous programming
Frontend: JavaScript, React, HTML, CSS, forms, API integration, error and loading states
Databases: SQL, PostgreSQL, SQLAlchemy ORM, relational models, Alembic migrations
Security: Authentication, authorization, Google OAuth 2.0, JWT, HttpOnly cookies, session management
Systems: C, C++, Linux, Docker, Docker Compose, Bash, HTTP, CGI, TCP/IP fundamentals
Tools and practices: Git (advanced), GitHub, debugging, Valgrind, Makefiles, manual functional testing
Additional: Java, basic n8n automation; daily AI-assisted development with code review and validation

SOFTWARE ENGINEERING PROJECTS

Transcendence / Trivia Trap - Web Application Development | Aug 2026 - Present

Academic team project | 5 members | Python, FastAPI, React, PostgreSQL, SQLAlchemy, Pydantic
github.com/bg-otman/Trivia_trap | Live application

- Developed backend REST APIs for registration, login, password recovery and friendship features; integrated them with React frontend interfaces.
- Implemented Google OAuth 2.0 login, JWT sessions and HttpOnly cookies, with input validation and authorization checks to control access to user data.
- Built friendship requests and user search using SQLAlchemy and PostgreSQL, enforcing user-specific data access.
- Implemented password recovery with hashed, expiring, single-use tokens and session invalidation; ran email delivery in background tasks and password hashing outside the async event loop.
- Built authentication forms with error/loading states and integrated an Arabic keyboard; collaborated through Git/GitHub and technical discussions, and verified feature behavior.

Webserv - C++ HTTP Server Development | Mar - May 2026

Academic team project | C++98, HTTP/1.1, CGI, cookies, sessions

- Contributed to a collaborative HTTP server project, implementing CGI execution to support multiple CGI programs.
- Implemented cookie and session handling, connecting server-side request processing with stateful web behavior.

Inception - Containerized Infrastructure | Jul - Aug 2026

Linux, Docker, Docker Compose, NGINX, MariaDB, Bash

- Configured HTTPS, separate application/database services, a dedicated Docker network and persistent volumes.
- Automated service configuration and startup with Dockerfiles and Bash scripts; implemented five bonus services.

Minishell - Unix Shell Development | C

- Worked on command parsing and Unix pipelines between processes.

EDUCATION

1337 Coding School (42 Network / UM6P) | Benguerir, Morocco

Software Engineering Common Core - In progress | 2024 - Present

Project-based, peer-learning curriculum. Additional projects: Cub3D (C raycasting), NetPractice (TCP/IP networking).
Baccalaureate in Life and Earth Sciences (SVT) | Morocco | 2022

LANGUAGES

Arabic: Native | English: Working proficiency | French: Basic
