EDUCATION

1337 Coding School (42 Network / UM6P) | Ben Guerir, Morocco

Software Engineering Program | 2024 - Present

Project-based curriculum in systems programming, algorithms, networking, and Unix.

Azouzzia High School | Marrakech, Morocco

Baccalaureate in Life and Earth Sciences (SVT) | 2022

TECHNICAL SKILLS

Languages: C, C++, Python, JavaScript, SQL, Bash; HTML/CSS

Backend & Databases: FastAPI, REST APIs, Google OAuth 2.0, PostgreSQL, MariaDB

Systems & Tools: Linux, Docker, Docker Compose, NGINX, Git, Make, Valgrind, n8n

Fundamentals: Object-oriented programming, memory management, HTTP, CGI, sessions

TECHNICAL PROJECTS

Trivia Trap (ft_transcendence) | Aug 2026 - Present

Python, FastAPI, PostgreSQL | Team of 5

- Develop email/password authentication and Google OAuth 2.0 sign-in for a multiplayer trivia application.
- Build the friend system to manage relationships between users of the application.

Inception | Jul 2026 - Aug 2026

Docker, Docker Compose, NGINX, MariaDB, WordPress, Bash

- Built a containerized Linux web stack with NGINX serving HTTPS, WordPress with PHP-FPM, and MariaDB in separate containers.
- Configured persistent volumes and a dedicated Docker network; automated service setup and startup using Dockerfiles, shell scripts, and Docker Compose.
- Extended the core infrastructure with five additional services for the project bonus requirements.

Webserv | Mar 2026 - May 2026

C++98, HTTP/1.1, Common Gateway Interface (CGI), Cookies, Sessions

- Implemented CGI execution in a team-built C++ web server, adding support for multiple CGI programs to run dynamic server-side scripts.
- Implemented cookie and session handling to maintain user state across HTTP requests.
